HPE Active Health System

Contents

Privacy Statement

HPE Active Health System (AHS) is an essential component of the HPE Integrated Lights Out (iLO) that helps maximize system uptime and health. It monitors and logs changes at system level, enabling customers to have accurate information to assist in diagnosing problems and delivering rapid resolution, should system issues occur.

HPE Active Health System provides:

- Consolidation of existing diagnostic tools into one place
- Always on, continuous monitoring for increased stability and shorter downtime
- Rich configuration history
- Health and service alerts

AHS does not collect any personally identifiable information or network security-related information, for example, location, usernames, passwords, or operational data. All data collected is managed according to the **Hewlett Packard Enterprise Data Privacy policy**.

Examples of data that are collected, include:

- Server model number
- Serial number
- Processor model and speed
- Storage capacity and speed
- Memory capacity and speed
- Firmware/BIOS

For more information about the new HPE Active Health System, see:
